

## 2.2 SpringBoot 整合 freemaker

demo3.zip  
87.8KB

freemaker 控制器:

方法指向对应的模版,还可以在模版内传值到前端.

@Controller

```
public class FMController {

    @RequestMapping("/fm/home1")
    public String home(){
        return "home";
    }

    @RequestMapping("/fm/home2")
    public String home2(Model model){
        model.addAttribute("time", new Date().toLocaleString());
        return "home2";
    }

    @RequestMapping("/fm/home3")
    public ModelAndView home3(){
        //返回home3模版
        ModelAndView model = new ModelAndView("home3");
        model.addObject("time", new Date().toLocaleString());

        return model;
    }
}
```

2 前端模版位置,模版结尾必须为.ftl

配置文件 只写了端口
